### What is COVID-19?
- COVID-19 is a contagious respiratory illness.
- This infection is caused by a new coronavirus that was first seen in Wuhan, China.
- Many infected people have mild or no symptoms. Difficulty breathing, pneumonia, organ failure, and death can occur.

### How does COVID-19 spread?
- Person to person: You can become infected by breathing in an infected person’s cough or sneeze droplets from up to 6 feet away.
- Contaminated surfaces: You can become infected by touching contaminated surfaces and then touching your mouth, nose, or eyes. High-risk surfaces include door handles, elevator buttons, counters, cellphones, and surfaces in common areas.

### Can I get COVID-19?
- Yes. You may have been exposed if:
  - You live with someone with COVID-19
  - You took care of someone with COVID-19
  - You were in contact with someone with COVID-19
  - You touched a contaminated surface or object
  - You may be more likely to get COVID-19 if you traveled recently, are a healthcare worker, or were in a place with many cases.
  - You are at risk for more serious symptoms if you have a weak immune system, heart disease, lung disease, or are older than 60.

### What are the symptoms?
- Common symptoms: dry cough, fever, shortness of breath
- Less common symptoms: fatigue, muscle and joint pain, sore throat, headache.

### How can I protect myself and others?
- Avoid close contact or sharing personal items with people who are sick
- Avoid touching your eyes, nose, and mouth
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash
- Clean surfaces and frequently touched objects
- Wash your hands with soap and water for at least 20 seconds or use a hand sanitizer containing at least 60% alcohol if soap and water are not available
- Stay home and avoid being with people outside of your immediate family

### What should I do if I feel sick?
- Stay home and call your doctor. If you are having trouble breathing, suddenly feel drowsy or confused, or notice your lips or face turning blue, call 911.
- Most people with mild symptoms can recover at home. If you must leave home to see a doctor, call beforehand and avoid public transport.
